

Best performance

Native app development

development

max compatibility

web development

compiled language

(C, C++, Swift)

hello.c

compiler [CPU arch dependent]

.obj

← asm code

Linker [OS dependent]

Executable

platform (OS) dependent
(Native)

mixed languages

(Java / python / JS)

(JVM / PVM)

interpreted languages

(HTML / CSS)

hello.html

Browser
JavaScript

Interpreter

operating system

→ Assembly language

Binary language

Electrical signals

assembly language

→ dependent on CPU architecture

- CISC → x86 / x64
- RISC → ARM
- SPARC

Mobile development

- Native development
 - platform specific
 - Executable

- Web development

- Hybrid development
Native + interpreted

Android

Java / Kotlin

.apk / .abb

html / css / JS
browser

iOS

Swift / Objective-C

.app / .ipa
bundle distributable

html / css / JS
browser

- cross platform development

→ PhoneGap → Native → web browser
JS / HTML / CSS web site

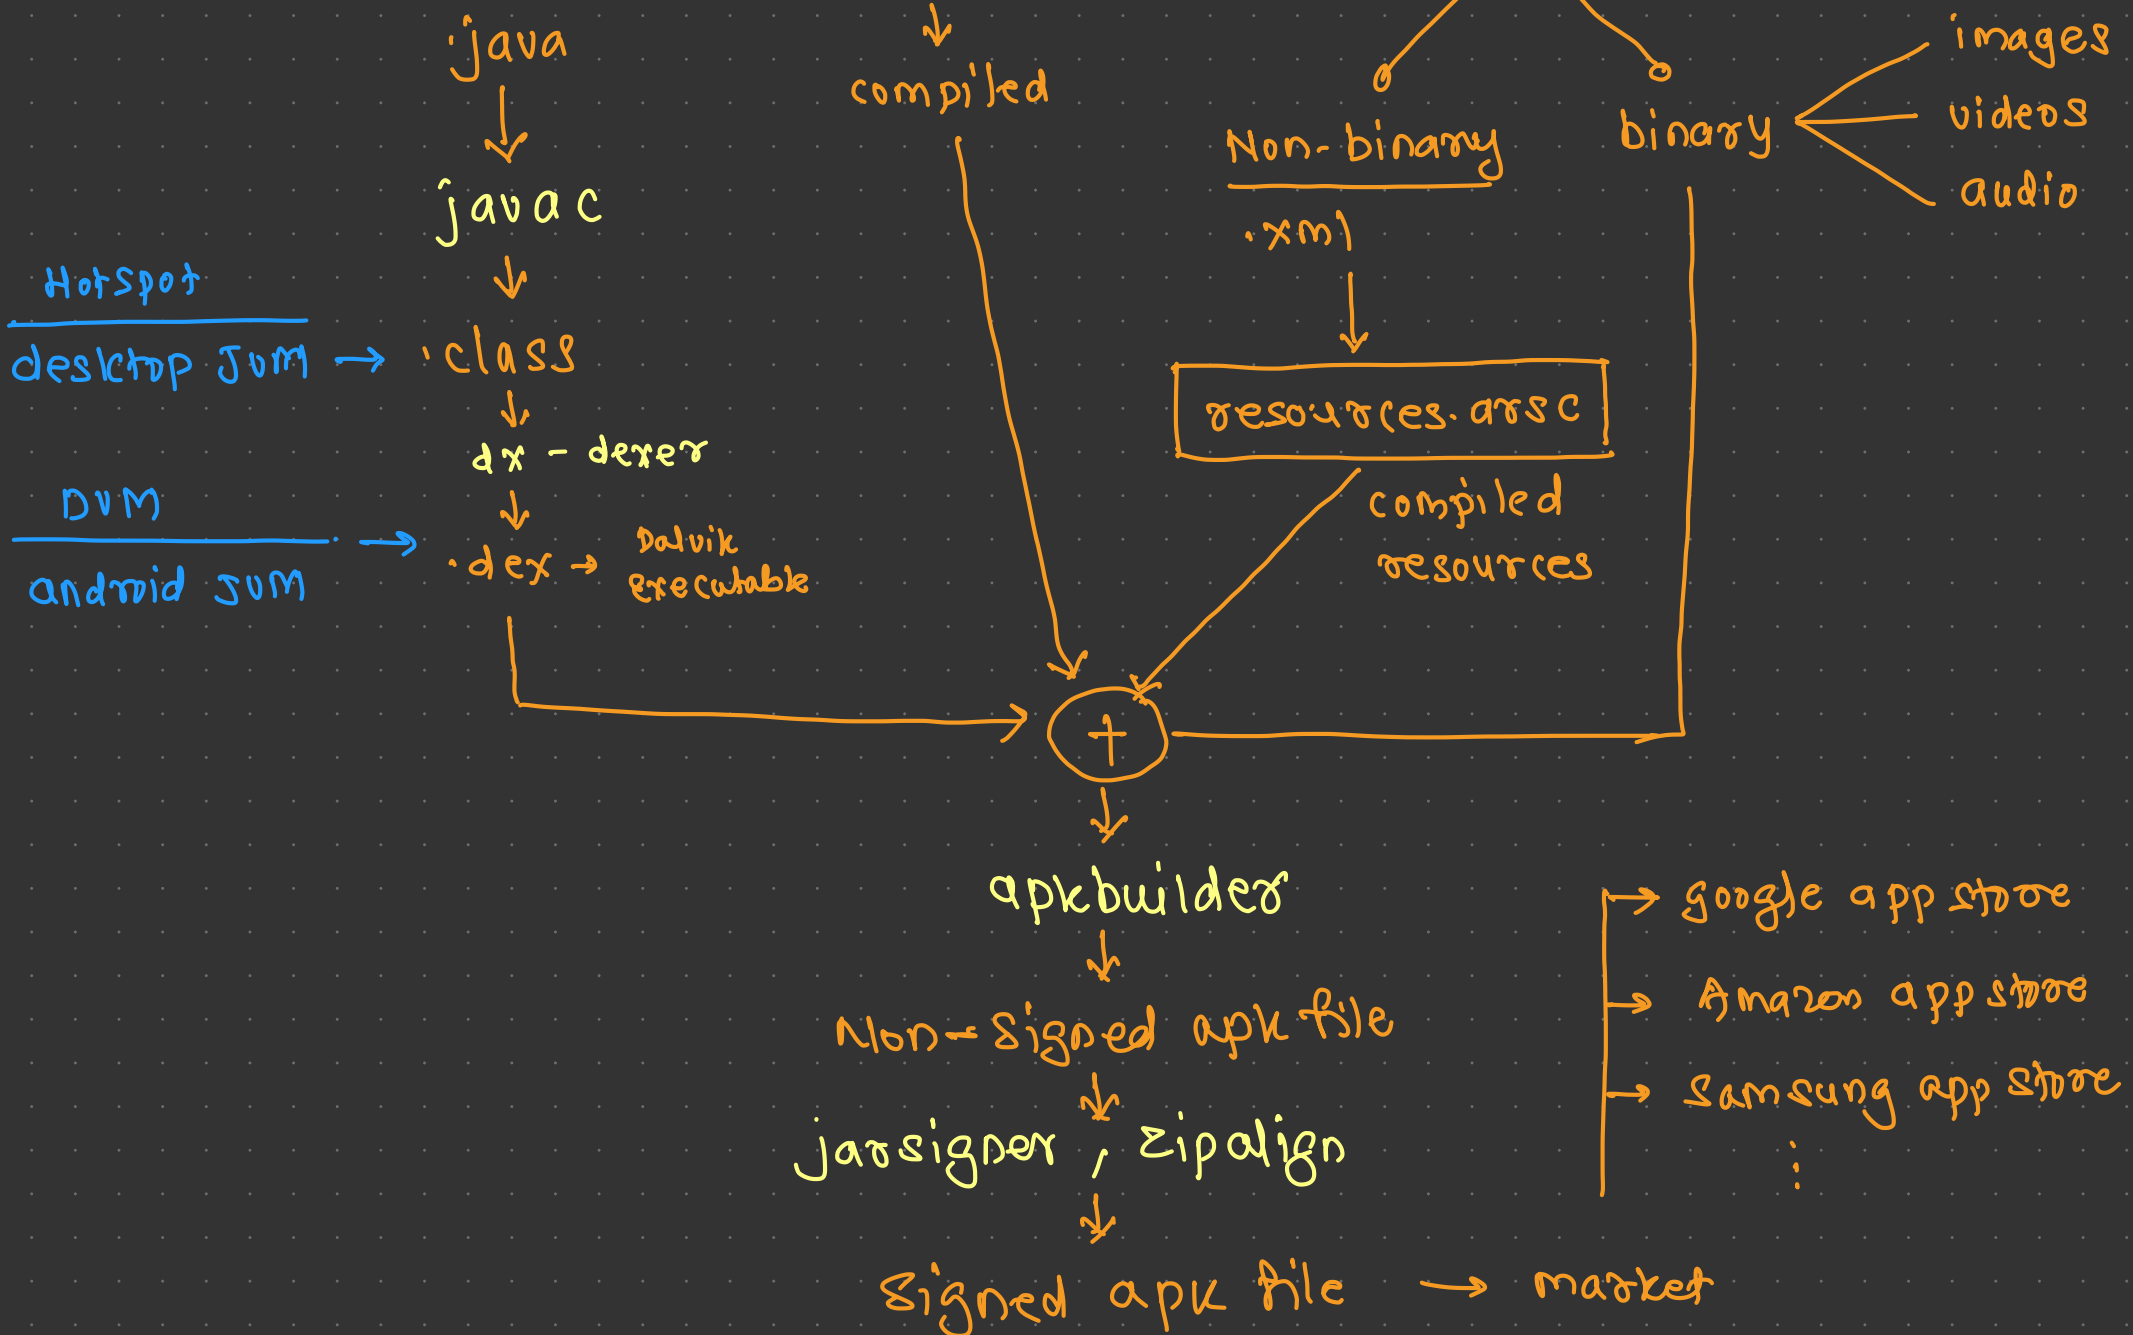

→ Sencha Touch

→ React Native → JS + mobile sdk = Native app

→ Xamarin → C# + .Net = Native app

Source

Resource

ios requirements

1] OS → macOS [apple machine / Hackintosh / VM]
↳ macintosh

2] languages → swift / objective-c

3] ios sdk

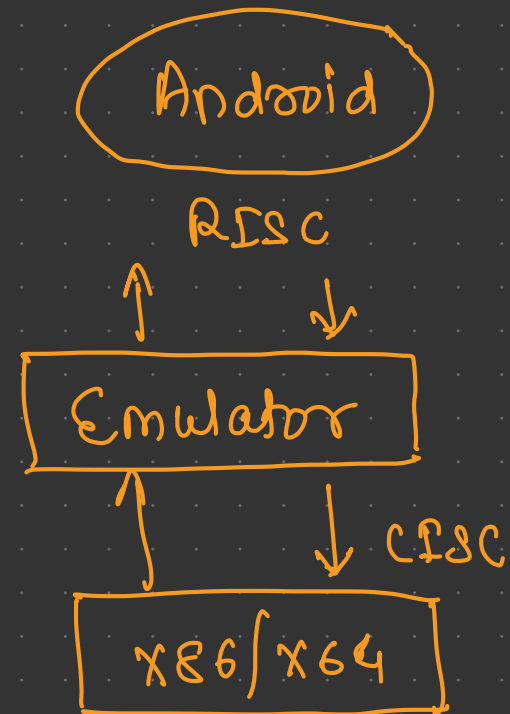

SDK	Android	ios
① collection of headers/namespaces	packages → android.app	framework → CoreLocation
② collection of libraries	——— ↳	——— ↳
③ toolchain → collection of required utilities	compiler → javac, dx debugger → jdb others → adb, monkey runner.	compiler → swiftc debugger → LLDB utilities → profilers
④ documentation	developers.android.com	LLVM — Low Level virtual machine developers.apple.com
⑤ IDE	Android Studio	Xcode
⑥ Emulator/VM/ Simulator/runtime	Emulator → qemu, Bluestack	simulator → ios simulator

Emulator

- converting CPU instructions → RISC → CISC
- runs real OS and not a simulated platform

Simulator

- does not run real OS
- simulates behavior of app

Apple

- macOS → OS for desktop
- iOS → OS for iPhone & iPod
- iPadOS → OS for iPad
- tvOS → OS for Apple TV
- watchOS → OS for Apple Watch

language - Swift

IDE - Xcode

iOS

- OS for mobile devices → iPhone / iPod
- smaller footprint of macOS
- is derived from macOS

macOS

- OS for desktop
- uses hybrid kernel

↪ University of California Berkeley

- ① Darwin → developed by BSD [Berkeley Software Distribution]
- ② Mach Kernel - developed by Carnegie Mellon University
